

Luong Chi Trung

– AI Engineer –

(+84)91-123-7719 | luongchitruong.work@gmail.com | linkedin.com/in/luongchitruong | github.com/truni46 | [Portfolio](#)

SUMMARY

AI Engineer with 2+ years of experience in AI/ML research and engineering, focusing on NLP and LLMs. Experienced in multi-agent systems, AI-driven digital transformation and recommendation systems. Particularly interested in expanding my expertise toward Vision Language Models and Edge AI.

EDUCATION

Ton Duc Thang University

Outstanding's Bachelor in Computer Science (GPA: 8.5/10)

Graduated with Honors One Semester Ahead of Schedule

IELTS: 6.0

Ho Chi Minh, Vietnam

Sep 2022 – May 2026

TECHNICAL SKILLS

Programming Languages: Python, Java, C

Databases: MySQL, PostgreSQL, Qdrant

AI/ML Frameworks: PyTorch, TensorFlow, LangChain, LangGraph, Unsloth

DevOps: Git, GitHub Actions, CI/CD, Flask, FastAPI, Docker, AWS, GCP

AI Tools: Claude, Codex, Ollama, n8n

EXPERIENCES

AI Engineer

VTC Telecom

Nov 2025 – May 2026

Vuon Lai Ward, Ho Chi Minh City

- Deployed an internal knowledge system to support AI integration into inventory management, document review, and operational auditing workflows.
- Developed a customer support chatbot to assist the service team in handling customer requests and accelerating response decision-making for nearly 200 aircraft under the Vietnam Airlines IFC project.
- Orchestrated AI Agent-based workflows for the R&D department, enabling automated research, planning, testing, and report generation.

Resesarch Assistant

AIAI Research Laboratory

Mar 2024 – Apr 2026

Tan Phong Ward, Ho Chi Minh City

- Investigated emerging applications of graph learning methods for Traffic Forecasting.
- Benchmarked baseline models and constructed new datasets for Traffic Forecasting and Sequential Recommendation.
- Published two Scopus-indexed International Conference papers in the field of Time Series Forecasting.

PROJECTS

THUA - 🌀 | Python, vLLM, Docker

July 2026 – Aug 2026

- Description: Applied **Tensor Hybrid Unified Acceleration** techniques to optimize inference performance of **LFM2.5-1.2B** model on 1 x MiG H200, targeting TTFT tail latency under Poisson burst traffic.
- Roles: AI Engineer
- Responsibilities:
 - * Applied KV Cache Optimization and Continuous batching technique to efficiently serve 330 scored requests with 4K-token inputs, achieving **120.4 ms p50 / 288.1 ms p95 TTFT** and **0.90 ms p50 TPOT**.
 - * Validated accuracy degradation against the BF16 baseline using GPQA, then benchmarked inference performance on the provided request trace, achieving an **ERS of 0.7134**.

Mera - 🌀 | Python, LangChain, LangGraph, Docker, Qdrant, PostgreSQL

Jan 2026 – May 2026

- Description: Architected an enterprise-grade internal knowledge management system to centralize organizational documents and enable retrieval-augmented search, accelerating information access and task execution.
- Roles: AI Engineer
- Responsibilities:

- * Engineered an Agentic RAG-based system with enhanced short-term and long-term memory management modules, improving retrieval performance and reducing average search latency **from 5 seconds to under 3 seconds**.
- * Integrated **PaddleOCR-VL-0.9B** to digitize handwritten documents and photographed contracts, enriching the enterprise knowledge base with structured and searchable information.

Mergers and Acquisitions Event Detection | *Python, LoRA, vLLM, Unsloth*

July 2025 – Aug 2025

- Description: Designed a pipeline to identify and extract merger and acquisition events across diverse textual sources such as books, newspapers, and financial reports.
- Responsibilities:
 - * Established **32 formal definitions** and annotation guidelines for M-A events to support model training and evaluation.
 - * Integrated **Llama 3.1-8B** and **Qwen3-8B** into the pipeline architecture, enabling high-performance recognition of **10,000+ M-A event instances** across heterogeneous textual sources.

AWARDS AND HONORS

- First Prize at DATASTORM 2025
- Outstanding Bachelor's Graduate in Computer Science
